/note="Vector: Lambda Zap; At the trifoliate stage, M. truncatula plants were transplanted to phosphate-free sand and grown for a further 30 days. During this 30 day period, the plants were fertilized twice weekly with 1/2 Hoaglands solution containing only 20uM potassium phosphate. RNa was prepared from above ground tissues."

It currently * consists of 38 contigs. The true order of the pieces is not known and their order in this sequence record is * arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.

```
This 12.8 kb DNA sequence spans the region from -6.65 kb relative to the transcriptional start site to +6.15 (located in the third exon) of the murine endothelial growth factor (VEGF) receptor-2 gene Filt. This portion of the Filt.1 gene was isolated from the liver of mouse strain 129/SvJ by screening a phage library of liver genomic DNA in vector lambda FixII. Sequences within the 5'-flanking region of the gene, in combination with sequences located within the first intron, specifically and reproducibly target expression of heterologous DNA to andioloblasts during early stages of vascular equal expression of the vasculature of postnatal mice. The regulatory sequences of the first intron also function as an autonomous endothelium specific enhancer when fused to a autonomous endothelium specific enhancer when fused to a suconomous endothelium specific enhancer. This Filt-1 intron enhancer contains several potential binding sites for transcription factors of the Ets and GATA families. The invention provides a new claimed recombinant DNA (1) comprising at least one regulatory sequence from an intron of the Fik-1 gene, or its homologue, to control expression in endothelial cells, in vivo, linked to (b) a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New recombinant DNA containing heterologous sequence controlled by endothelial cell specific regulator - from the Flk-1 gene, used to treat, prevent or diagnose vascular disease, tumours, also to screen for transcriptional regulators

these, or transformed cells, are used to identify agents (A), obtential pharmaceuticals, that suppress, activate or enhance transcription of genes in endothelial cells. (I), vectors and (A) are used to direct or prevent (for antisense sequences) expression of genes specifically in endothelial cells. (I), vectors and (A) are used to direct or prevent (for antisense sequences) expression of genes specifically in endothelial cells, eg. for treating angiogenesis, cancer, diabetic retinopathy, rheumatoid arthritis etc., and in wound healing, particularly for treating vascular specifically atherosclerosis), tumours and neuronal disorders. They may also be used to induce vascular disease in the transgenic animals or diagnostically, particularly for studying (mal)function, interactions and unregulated expression of endothelial products. (I) provide specific modulation of gene expression in endothelial cells, at all stages of development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            6455

Bases (-225) to (-164) of the present sequence, the KDR/flk-1
promoter, regulate the endothelial cell specific transcription of
a polypeptide encoding sequence to which it is operably linked,
e.g. tissue plasminogen activator, p21 cell cycle inhibitor,
nitric oxide synthase, interferon gamma or atrial natriuretic
polypeptide. The products can be used in gene therapy, e.g. to
inhibit or enhance angiogenesis, or to treat tumours or vascular
diseases, such as arteriosclerosis or inflammatory diseases, e.g.
rheumatoid arthritis or diabetic retinopathy. They can also be
used to promote wound healing, e.g. healing of broken bones,
burns, diabetic ulcres and traumatic or surgical wounds, or to
treat peripheral vascular disease, atherosclerosis, cerebral
vascular disease, hypoxic tissue damage, e.g. hypoxic damage to
heart tissue, diabetic pathologies, such as chronic skin lesions,
or coronary vascular disease. They can also be used to treat
patients who have, or have had, translent ischemic attacks,
or poor circulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           421 acttccaccagaaaccgagctgcgtccagatttgctctcagatgcgacttgccgccggc 480

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human amouse KDR/fik-1 DNA was obtained, and DNA elements important for basal expression in endothelial cells identified using a series of luciferase reporter plasmids containing serial 5 deletions through the promoter region. The deletion analysis indicated that 3 sequences in the 5' flanking region of the gene contain elements important for expression in endothelial cells. The promoter sequence which regulates endothelial cell specific transcription was found to comprise nucleotidses (-225) to (-164)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             481 acagttccggggtagtgggggagtgggcgtgggaaaccgggaaacccaaacctggtatcc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A receptor tyrosine kinase cDNA, designated foetal liver kinase I (Flk-1), was cloned from mouse cell populations enriched for haematopoletic stem and progenitor cells. The nucleotide coding sequence and deduced As sequence of the murine Flk-1 gene is depicted in Q64049/R54046) and has been described in Matthews et al., 1991, proc. Matl. Acad. Sci. USA, 88:9026-9030. The murine Flk-1 gene was isolated by performing a PCR using two degenerate oiling primer pools that were designed on the basis of highly conserved sequences within the kinase domain of receptor tyrosine kinases (Hanks et al., 1988). Based on AA homology, this receptor is a member of the type III subclass of RTKS (Ullrich and Schlessigner) which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -cagocgoggctggagccagggcgccggtgcccgcgctctccccggtcttgcgctgcgg 829

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cells, and to isolate positive cells. The antibodies can also be used as, or to obtain ligands, which stimulate the proliferation and/or differentiation of stem cells. The ligands can be used, e.g. for treating anaemia, or bone marrow damage resulting from cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Anti-foetal liver kinase 2 (flk-2) antibodies - useful in assays, for isolating haematopoietic stem cells expressing receptor and for obtaining ligands
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes murine foetal liver kinase 1 (flk-1), a protein tyrosine Kinase. Isolated antibodies, pref. monoclonal, raised against the extracellular portion of flk-1 can be used to assay for flk receptors on the surface of haematopoietic stem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 17; Length 5404;

This invention describes a novel method of isolating cells expressing fetal liver kinase 1 (flx1) receptors on their surface and comprises binding the cells to a polyclonal or monoclonal antibody specific to the Fix-1 receptor and isolating the cells that have bound to the antibody. The method can be used to isolate hematopoietic stem cells in any manmal but preferably a rat, mouse, rabbit or human. The proteins of the invention belong to the receptor protein family. This sequence encodes the murine flx-1 protein which is used in the method of the

                                            The murine foetal liver kinase (flk) -1 clone was isolated by standard PCR techniques from stem-cell receptor-contg. tissue cDNA libraries. Sultable tissues include foetal liver, spleen or thymus cells or adult marrow or brain cells. The PCR primers used are based on known sections of the flk-1 gene. The murine flk-1 clone may be used in a vector to transform haematopoietic cells. The thymidine kinase encoded by flk-1 is expressed in primative but not mature
                                                                                            Thymidine kinase; TK; haematopoietic; stem cells; proliferation; differentiation; progenitor cells; foetal liver kinase; ss.

                                                                                                                                            This sequence encodes a human receptor protein tyrosine kinase which belongs to a new functional class of protein tyrosine kinases (pTKS). However, this pTK is not in the same class as fik-2. pTKS in the same class as fik-2 pTKS in the same class as fik-2 but not in mature hematopoietic cells (mHC). This gene is expressed in more mature hematopoietic cells. The protein encoded by this sequence is an example of a receptor pTK and is called fetal liver kinase 1 (fik-1). Fik-1 is expressed in fetal liver, spleen, thymus, brain, stomach, kidney, lung, heart and intestine, and adult brain, kidney, heart, spleen, lung, muscle, marrow and lymph nodes.

                                                                                                                                                                                                                                                                                                                             The sequence corresponds to a cDNA encoding a mouse Flk1 (fetal liver kinase) receptor protein-tyrosine-kinase. Flk1 is expressed in both primitive and mature hematopoietic cells, and in other tissues. The gene product is useful in isolation of receptor ligands, which have applications in diagnosis of bone marrow disorders and in stimulating proliferation and/or differentiation
/product= Flk1 receptor protein-tyrosine-kinase

This sequence encodes the murine fetal liver kinase I (flk-1). flk-1 is a receptor protein tyrosine kinase (pTK). flk-1 is found in the same organs as flk-2 (see also T72117-18) as well as in fetal brain, stomeoth, kidney, lung, heart and intestine, and in adult kidney, heart, spleen, lung, muscle and lymph nodes. flk-1 is not a member of the manure hematopoietic as flk-2, as flk-1 may be found in more mature hematopoietic cells. The invention concerns a recombinant nucleic acid, preferably mRNA, which encodes a protein containing only the extracellular domain of human flk-2 and lacking the flk-2 intracellular domain. The resultant protein represents a soluble form of flk-2 which is used to isolate specific ligands for flk-2. These ligands can be used to stimulate proliferation and/or differentiation of mammalian hemmetopoietic stem cells, in vivo or in vitro, e.g. for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Important for basal expression in endothelial cells identified using a series of luciferase reporter plasmids containing serial 5' deletions through the promoter region. The deletion analysis indicated that 3 sequences in the 5' flanking region of the gene contain elements important for expression in endothelial cells. The promoter sequence which regulates endothelial cells. The promoter sequence which regulates endothelial cells specific of the RDR/filk-1 promoter.
                                                                                                                                                                                                                                                                                                                                              KDR/flk-1 promoter sequence - useful for regulation of endothelial
cell specific transcription of operably linked polypeptide-encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tyctcaycycccyttaccyaytactttttatttaccayaaacaaattyttyctctyy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bases (-225) to (-164) of the present sequence, the KDR/flk-1 promoter, regulate the endothelial cell specific transcription of a polypeptide encoding sequence to which it is operably linked, e.g. tissue plasminogen activator, p21 cell cycle inhibitor, nitric oxide synthase, interferon gamma or atrial natriuretic polypeptide. The products can be used in gene therapy, e.g. to inhibit or enhance angiogenesis, or to treat tumours or vascular diseases, such as arteriosclerosis or inflammatory diseases, e.g. rheumatoid arthritis or diabetic retinopathy. They can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            448 cagcgctcctggtgatgctccccaaatttcggggaccggcaagcgattaaatcttggagt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    used to promote wound healing, e.g. healing of broken bones, burns, diabetic ulcers and traumatic or surgical wounds, or to treat peripheral vascular disease, atherosclerosis, cerebral vascular disease, hypoxic tissue damage, e.g. hypoxic damage to heart tissue, diabetic pathologies, such as chronic skin lesions, or coronary vascular disease. They can also be used to treat patients who have, or have had, transient isohemic attacks, vascular graft surgery, balloon angioplasty, frostbite, gangrene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11.6%; Score 107.6; DB 18; Length 1267; 57.5%; Pred. a truncated, soluble form, sVEGF-RII (R62486), of KDR (amino acids 1-663). sVEGF-RII was expressed in Sf9 cells. It can be used to inhibit VEGF-mediated mitogenesis.

                                                      This DNA encodes a soluble truncated form of KDR, a vascular endothelial cell growth factor (VEGF). This truncated sVEGF-RII contains the extracellular domain of KDR. A related soluble VEGF receptor/inhibitor (SVEGF-RI) molecule represents a fragment of the VEGF receptor that binds VEGF with high affinity but is unable to transduce a signal. sVEGF-RI is used to inhibit VEGF activity, specifically VEGF-induced angiogenesis, particularly for treatment of psoriasis, rheumatoid arthritis, haemangiomas, angiofilbromas, diabetic retinopathy, neovascular glaucoma or tumour vascularisation. The sVEGF-RI can be administered topically or intravenously or from slow-release matrices.

/note-"Vector: pTT7D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-C3 library is a subtracted library of a series, ultimately derived from a mixture of individually tagged normalized libraries from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, muscle, and 8, 12 and 18-day embryos, after a series of subtractions to reduce the representation of Connas from which ESTS had already been generated. The following serially subtracted libraries were generated in this process: UI-R-C3, UI-R-C2P, UI-R-C), UI-R-C0, UI-R-A1, UI-R-E1. The tag is a siring of 3-5 nucleotides present between the Not I site and the oligo-df track whichallows identification of the library of origin of a clone within themixture. The subtracted library of origin of a clone within themixture. The subtracted library of origin of a clone within themixture in a hybridization with the UI-R-C3 was constructed as follows: PCRamplified been derived was used as a driver in a hybridization with the UI-R-C2P library in the form of single-stranded circles and electroporated into DH10B bacteria (lifeTechnologies) to generate the UI-R-C3 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-866, 1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Email: msoares@blue.weeg.ulowa.edu

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Droscophila Genome Project (BDCP).

The BDCP is constructing a physical map of the Droscophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Droscophila melanogaster BAC library was prepared by Kazutcyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Centelics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the

Determination of this BAC-end sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Drosophila melanogaster genome survey sequence TET3 end of BAC # BACR19016 of RPCI-98 library from Drosophila melanogaster (fruit Lly), genomic survey sequence.

Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr) Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) -
please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://pacpac.med.buffalo.edu/drosophila_bac.htm.

http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Geneyieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Drosophila melanogaster genome survey sequence T7 end of BAC # BACR14N09 of RPCI-98 library from Drosophila melanogaster (fruit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         276 SINNISINITINSININISSINININSSTUSINISINSSSSTSTITITISISSINSATGSSSSINSSS 335

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutovo Osogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2: cn bw sp, the same strain used for the BDGP's pland EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://warpac.med.bDfffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        653 caagagagtaagctgtgtttccttagatcgcggggaccgctacccggcaggactgaaagc 712
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               474 gcccggcacagttccggggtagtgggggagtggggcgtgggaaaccgggaaacccaaact 533

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutovy Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Localion/Quallifiers

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fultfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecord ingestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.thm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila enome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila malanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EOSI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.
